

SKYMODULES

SkySoft-ATM have built-up a framework of various standard SkyModules in order to offer customers a wide range of ATM solutions in perfectly controlled production conditions.

THE NEW GENERATION OF ATM SOLUTIONS

Experience our flexibility

Due to fast technological move, project requirements are in permanent evolution, requiring sharper and sharper ATC expertise. Outstanding costs of interim ATC projects have pledged for smooth evolutions based on field operational experience. Thus, many ANSPs look for reliable alternative ATM solutions coming from an incremental development approach. ANSPs also wish to gain independence versus their suppliers: coding freedom, technology choice, open architecture, COTS solutions, etc. in order to serve new operational needs.

SKYMODULES

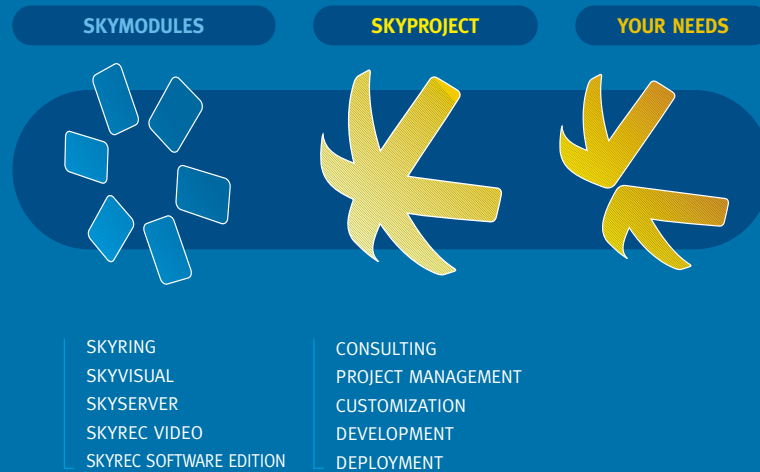

Experience our flexibility

Your benefits

- A complete ATC, APP, TWR integrated solution
- ATCO driven solution allowing natural adoption and limited training
- COTS, standard hardware, open architecture
- Costs / ROI optimization
- Easy maintenance
- Total flexibility and perfect adaptability to evolving needs
- Non proprietary solution
- Product customization to local airspaces
- Easy integration with customer environment
- Increased productivity and additional ANSP revenue
- Safety, ESARR 6 compliancy
- Fallback contingency

Each Module gathers various ATC functions which can be individually fine-tuned and deployed separately for specific projects. You can therefore build your personalized ATM solution thanks to SkySoft-ATM Module(s).

- ATM consulting: project definition, prototyping (high ATCO sensitivity)
- ATM integration
- ATM project management
- ATM development know-how
- ATM service: installation, training, warranty, upgrade support and/or fine-tuning support
